

a base connectable to said main unit, wherein said arm is connected to said base by a rotatable hinge.

18. The monitor unit according to claim 17, wherein said arm is connected to said monitor body by a rotatable hinge.

19. A monitor unit setting base for connecting a monitor unit connectable to a notebook type PC (Personal Computer) to a desktop type PC in place of said notebook type PC, comprising: a receiving portion capable of receiving an arm extending from said monitor unit; and a connector capable of receiving an image signal interface cable extending from said monitor unit, which is provided in said receiving portion.

20. A computer having a monitor unit provided with a display screen and a main processing unit including a control section for controlling said display screen, comprising:

an arm for supporting said monitor unit relative to said main unit;

a first hinge for rotatably connecting said monitor unit to said arm; and

a second hinge for rotatably connecting said main unit to said arm,

wherein an angle, between said first and second hinges, is set with respect to a predetermined angle between said main unit and said monitor unit,

and wherein said main unit has a concave portion for storing said arm.
